Investment philosophy

Income is the primary driver of longer-term performance

Investment Philosophy

We believe the key to superior long-term returns in the US corporate credit market is **compounding current income and avoiding default loss** through fundamental credit analysis that focuses on bonds of companies with improving credit trends.

Historical US High Grade Market Average Return**

(12/31/1977 to 12/31/2025)

Price Return	0.05%
Income Return	7.22%
Total Return	7.27%

Over the long term, income return has on average contributed 100% to the total return

Additional risks

US Investment Grade Credit

CREDIT RISK - If an issuer of bonds defaults on its obligations to pay income or repay capital, it may result in a decrease in portfolio value. The value of a bond (and subsequently, the portfolio) is also affected by changes in credit rating downgrades and/ or market perceptions of the risk of future default. Investment grade issuers are regarded as less likely to default than issuers of high yield bonds. High-yield, lower-rated, securities involve greater risk than higher-rated securities. Portfolios that invest in them may be subject to greater levels of credit and liquidity risk than portfolios that do not.

RISK OF CAPITAL LOSS – Any investment in our high yield strategies are not guaranteed and returns can be negative. The performance of a portfolio may not be consistent with the objectives of investors and their investment may not be fully returned.

INTEREST RATE RISK - Fluctuations in interest rates will change the value of bonds, impacting the value of the investment portfolio. Often, when interest rates rise, the value of the bonds fall and vice versa. The valuation of bonds will also change according to market perceptions of future movements in interest rates.

LIQUIDITY RISK - Some investments may trade infrequently and in small volumes and the risk of low liquidity level in certain market conditions might lead to difficulties in valuing, purchasing or selling bonds.

RE-INVESTMENT RISK - Reinvestment risk describes the risk that, as interest rates or market environment changes, the future coupons and principal from any bond may have to be reinvested in a less favorable rate environment. This is more likely to occur during periods of declining interest rates when issuers can issue bonds with lower levels of coupon. Re-investment risk may be greater with callable bonds

HIGH YIELD BOND RISK –US Credit IG portfolios may be exposed to a risk related to investments in high yield financial instruments. These instruments present higher default risks than those of the investment grade category. In case of default, the value of these instruments may decrease significantly, which would affect the value of the portfolio. Lower-rated securities generally tend to reflect short-term corporate and market developments to a greater extent than higher-rated securities which respond primarily to fluctuations in the general level of interest rates.

Investing involves risk and past performance does not guarantee future results. Bonds are subject to interest rate risk, credit risk, prepayment risk and market risk. High yield securities are subject to a greater risk of capital loss, credit risk, and default risk and liquidity risk. Investors in offshore vehicles advised or sub-advised, in whole or in part, by the Adviser employing the investment strategy described herein may be subject to currency exchange risk. There is no guarantee that the objectives of the investment strategy described herein will be achieved. The risk information provided herein is not sufficient to support an investment decision and is qualified in its entirety by the more complete disclosures, risk factors and other terms available upon request from BNPP AM.
